

x360Recover AutoVerify

Automated Backup Integrity Testing

x360Recover's patented feature AutoVerify intelligently tests your backup integrity. It verifies the backup data on the protected system to ensure you don't only have good backups, but that they are fully recoverable.

AutoVerify for Peace of Mind

AutoVerify is an enhancement to x360Recover's nightly BootVM check feature, which checks ALL drives with a deep check of data integrity, validates the recoverability of backup snapshots, and captures a screenshot of the protected system.

What is AutoVerify?

AutoVerify is a default feature of Axcient's business continuity and disaster recovery (BCDR) solution, x360Recover. Every day, AutoVerify automatically virtualizes recent backup recovery points for each system. Then it runs numerous tests to check for:

- Bootability
- Operating system health
- Data corruption, and
- File system and application integrity.

How AutoVerify Works

AutoVerify is a patented critical capability of x360Recover that ensures backups are always recoverable via boot and deep volume checks. x360Recover has supported integration into popular PSA/RMM tools so that AutoVerify data and BootVM screenshots can be seamlessly captured. In addition, Axcient x360Recover supports alerting and escalation rules so that techs are notified only when absolutely required. As part of Axcient x360Recover by default, you know AutoVerify intelligently tests your backup integrity on a regular basis.

Automated Testing

AutoVerify screenshots of successfully virtualized data provide proof that an MSP is automatically and regularly testing backups and eliminates the time sink of manual testing. Cyber insurers and compliance auditors are looking for proof of DR plan testing, that data is ready to virtualize, and data is backed up and usable without relying on a manual process with heightened risk of human error.

AutoVerify as a Defense Layer for Ransomware Protection

Axcient x360Recover comes complete with cutting-edge security and data protection technologies that make Business Continuity and BDR secure by design. Guarantee clients uninterrupted business continuity even after a sophisticated ransomware attack or data corruption with built-in protections like AirGap and AutoVerify.

THERE ARE MORE KEY BENEFITS TO AUTOVERIFY, SUCH AS:

- Proof of automated testing for better cyber insurability and compliance,
- Proactively alerting to issues before they become problems,
- Ending "backup burn": false reports that a backup was successful – green check and everything – only to be burned by finding out later the backup failed,
- Trusting notifications to direct your backup attentions instead of fear,
- Removing the risk of human error, and
- Reducing time spent and its costs verifying backups.
